

Moose Hunting Trip 2014

Science

Chlorine is a pale green gas and also a toxic chemical element number 17. Iron is a chemical element with the symbol Fe and atomic number 26. Calcium Carbonate that makes stuff hard and holds them together. PH is the measure of acidity in the liquid. Turbidity is he measures of clarity in the water, a higher number means it is clearer and a lower umber means it is less clear.

There are differences in the samples because the water is from different locations. We test these so we will know the difference in each body of water.

English

The relevant education is when we when we go on hunting trips and learn about things that are relevant to what we learn in school. On relevant education trips we have journals that includes an assignment for each class. We had to talk and work with each other while cooking, cleaning, hunting, and cutting up the meat.

Relevant Education is important culturally by the process of cutting up the meat and what to do while your out hunting, such as how to handle your gun, and to be quiet when your hunting. After camping when you're packing up to go home you have to clean up camp to make it look as good as it looked when you arrived. When your cleaning you should not leave trash or any of your belongings there.

The relevant education trips are important socially because we talk to each other while we set up camp and when we tear down camp. We talk to each other when were cooking so we do the right thing. When we are butchering the meat we communicate on what to do so we don't forget. The importance of communicating on relevant education trips is because we can learn from others when they're describing something on how to do something important.

Academic skills for the relevant education trips are important because we learn the Yup'ik terms for words. For math it is important because we measure the lengths of things we need. In Science it is important to know the species and types of animals. In English its important to know the real words for everything in the wilderness.

We spend two weeks on relevant education trips so we can learn more about how to take care of your catch. We communicate so we know what to do and so we do it the right way. We learn academically in a different zone so it wouldn't be hard to learn in different locations such as bigger places or smaller places.

Social Studies

Dog Fish

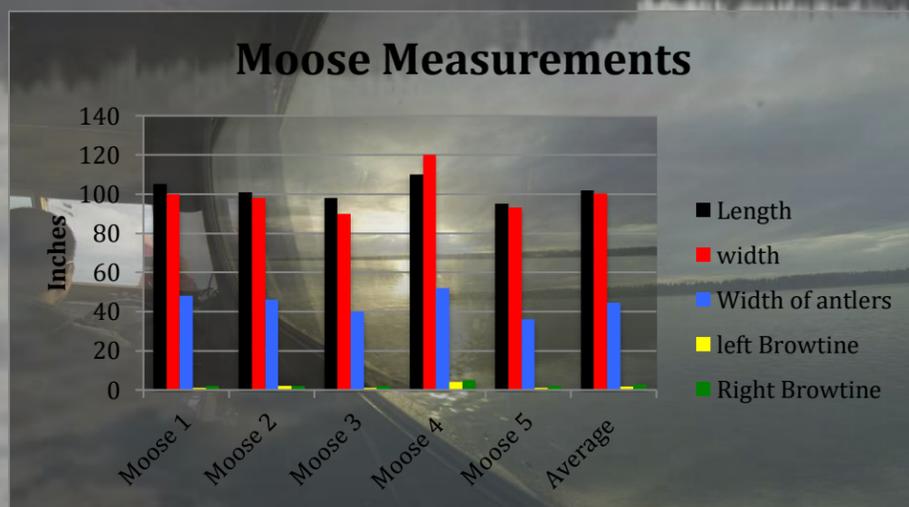

Math

The biggest moose antlers was moose 4. The smallest moose antlers was moose 5. The highest temperature was in the afternoon and the lowest temperature was in the evening.

Piamiut Moose Hunt

Knowing where we are is important because we might be going the wrong way if were looking for people or shelter. If you don't find shelter you might hit bad weather and something can happen to you.

Yup'ik

- Moose- Tunuvak
- Wilderness- Yuilquq
- School- Elicarvicuar
- Yukon- Kwigpak
- Boat- Angyaq
