

2014-2015 MOOSE HUNTING TRIP

Relevant Education

What is a relevant education? A relevant education is when you and other students/people go on a school trip and learn about outdoor survival and also about having fun. When you are on a relevant education trip you bring schoolwork and you measure trees, collect soils from different places, and record a lot of things you see. For example the moose hunting trip, when you catch a moose you measure the antlers and the body.

Relevant education is important culturally because, we support the community by going out hunting and catch food. If there weren't relevant education trips there would be less food for everybody, everybody would be getting store bought food. Also that if nobody went out hunting to catch food, no one wouldn't learn anything about survival, how to catch food.

Relevant education is important socially because, if there wasn't people that went out hunting the community would starve a lot and we would have a little bit of food. It is also important because it shows that how much people rely on each other, who they can trust, and also who is a good worker if they are not a good worker people wouldn't want to work or go out hunting with them. Also it shows that if you're not a hard worker and if you barrow something and never returns it people wouldn't want to trust you to handle things.

Relevant education is important academically because, it is important how to handle guns, and safety of everything you do out in the wilderness. When you are out hunting you always got to remember to be safe outside and everything you do. It is also important because you have to what you are doing and if you are with someone you are hunting with you have to be safe and be careful of the gun or any deadly things you are caring, you also have to know where you are and where you are camping.

This graph shows the soil measurements that we took from the moose hunting trip.

This graph shows who caught the biggest moose from the moose hunting trip.

This graph is about the temperatures we took on the moose hunting trip from morning, afternoon, and evening, when we were on the moose hunting trip.

This is a picture of students pulling Mitchell's moose that he caught. They had to use a canoe and rope to pull. David sallison's boat helped Mr. Hanson's boat bring mitchell's moose to their boat. On that day they were packing the moose it was very nice out. The distance they had to pack the moose was like from high school to elementary.

This picture is a map of the places we went up in paimuit. There is another picture on it, it shows our camp, the picture was taking during the night. In 12 mile slough is where david sallison's boat had to get toad back to camp. Cotton wood slough is where Adrian caught his moose, his moose was 46 inches.
